

Backed by our famous
"GOOF-PROOF" Warranty

Main Features of this Decoder:

BEMF Load Compensation: Provides superior slow speed control performance under load.

Quiet Drive: Super-quiet motor control for "buzz" free motor performance.

DC Mode: Decoder will automatically detect DC power. You can also configure how your lighting effects function on DC.

Variable Momentum: Allows you to make custom acceleration and deceleration curves.

+12V Lighting: This decoder uses an unregulated 12V supply for lighting. For use with LED's, you must include current-limit resistors (1K Ω recommended).

Function Remapping: Buttons 0 through 12 may be used to control the lighting functions of this decoder.

Programmable Lighting Effects: Choose from 20 separate user-programmable lighting effects!

Decoder Lock: Feature which prevents accidental/unwanted programming

Speed Tables: Configure custom speed curves and set speed limits.

Other Features of This Decoder: This decoder has more features than could be listed in this pamphlet. For the complete list of available features, visit our website tcsdcc.com to download the "Comprehensive Programing Guide" found in the Documentation section of our website.

WARRANTY PROCEDURE: All decoders are covered by a one-year warranty. This decoder must be returned in a small box.

1. For registration, more details, and disclaimers, visit tcsdcc.com/warranty
2. Print out a copy of the Warranty Registration and include it in the box
3. Return decoder(s) directly to TCS using the address below.

Scale	Functions	Function Rating	Continuous/Peak
N/HO	2	100 mA	1.0 /2.0 Amp

Dimensions: 0.419" x 0.71" x 0.191" or 10.63mm x 18.02mm x 4.85mm

The MC2 is a 2-function HO and N scale hard-wire decoder with a 7-pin JST harness. Harness is included in this package.

The MC2 is designed for use in locomotives where a T-series is too large, but you do not want a permanent hard-wire solution as with the M-series.

BASIC CONFIGURATION

CV 29 Configuration			
A	0	1	Reverse the direction the engine runs.
B	2	2	Use 28/128 speed step mode.
C	4	4	Enable analog (DC) operation.
D	0	16	Make the Loadable Speed Tables active.
E	0	32	Make the decoder address 128 or higher.
CV 29	6		← Program the sum of the values you choose into CV 29
2 Digit Address Use if the address is 127 or less.			
CV 1	3		← Record your choice here.
4 Digit Address Make sure 4-digit Addressing is enabled in CV29			
CV 17	0		← Record your four digit address here Your command station will assign the values of CV 17 and CV18
CV 18	0		
Consist Address Add 128 to reverse the loco when in consist.
