

Our Famous
GOOF PROOF Warranty

1617 IB-MB1

Scale	Pairs well with
HO	WOW121-Diesel and EU621

Dimensions 2.82" x 0.69" x 0.33" or 72mm x 18mm x 8mm

This motherboard is designed to replace the original lighting board in Intermountain and Bowser diesel locomotives. Created to fit the Intermountain ES44 as well as the Bowser S12, the IB-MB1 will fit a wide array of other locomotives. However, it will require comparing the original light board as there are a few styles of Intermountain/Bowser motherboards which look very similar. Included on this motherboard is a KA3 Keep-Alive™ for smooth operation over troublesome tracks.

Pair with a WOW121 for unparalleled sound and interruption free performance.

NOTE: This product does not function without a 21-pin decoder.

WIRING DIAGRAM

This board is a direct replacement for the Intermountain and Bowser factory light board with connectors. Simply unplug the factory light board, mount this board in its place, plug in the connectors from the locomotive, and plug in your 21-pin decoder.
